# Protege Mobile App

The Protege Mobile App uses the power of the Protege WX and Protege GX systems, enabling you to monitor and control your building while on the go, with the ease and convenience of your smartphone. As long as you have an internet connection, you can connect to any of your Protege WX or Protege GX sites, check the status, arm or disarm, control lights, locks, signage, heating - even cameras - from anywhere, anytime.

Feature Highlights

> Connect to any of your Protege WX Protege GX sites while on the go

> Simple to install and setup

> Receive alerts of system or sensor activity

> Easily view live events

> Instant awareness of system status - arm and disarm with a simple tap

> One touch control for advanced functions

> View live camera feeds from IP cameras

> Perform advanced functions to change the layout of the Protege Mobile App and search for specific records

> Use your smartphone as your access credentials to replace your existing card or tag

Simple Setup

The Protege Mobile App guides you through configuring your Places with helpful tool tips and a simple to navigate menu structure.

One Touch Control

View and control the state of doors, areas, sensors (inputs), controls (outputs) and cameras (select stream types) with a simple click or a long press for advanced functions.

Instant Awareness

No more second guessing whether you set the alarm before leaving the office - the app provides instant awareness of system status, and enables you to arm or disarm with a simple tap. Fumbling for a garage remote becomes a thing of the past as you can use your phone to open the door. And forget about coming home to a cold, dark unwelcoming apartment. A few more taps and you have the heating and lights turned on, all from the comfort of your car.

Mobile Credentials

Use your smartphone as your access credentials to replace your existing card or tag using Bluetooth or NFC. Download a credential from the in-app menu and have the supplied site code and card number entered against your user record in the system*.

Live Event View

View the live events that you would usually see in your Protege WX or Protege GX system. This enables you to easily identify what areas are being armed or disarmed, who is passing through the doors and what input have raised an alarm.

Push Notifications

Subscribe to push notifications to receive alerts of system or sensor activity. As a parent you get peace of mind to see the system disarmed when the kids return home from school. As a business owner, you see that the system is disarmed at the start of the day, and rearmed when everyone goes home. And of course, you're alerted promptly of any alarms.

Live Camera Feed

The Protege Mobile app supports the monitoring of IP cameras that allow direct URL access to either a static JPG image feed or a streaming MJPG video feed. If you are able to paste a URL into your browser and view the raw camera image, you can view the feed from the Protege Mobile App.

Customizable Layout

The Protege Mobile App includes an Advanced menu which enables you to:

> Switch the display between grid and list view. Switching to list view is ideal for sites that contain many records

> Add and remove items from the home page

> Reorder records that appear on the home page and each of the control pages

> Search for specific records on any of the control pages, and on the home page. Events are filtered as you type and the more specific you are, the more likely you are to find the event or events that you're looking for

*Requires an NFC / Bluetooth capable device and tSec reader with firmware build 178 or above.
